

Science – Year 3 – Forces and Magnets

Concept: Forces : Understand objects stay in one place or moving with constant speed and direction unless a force acts on them → acceleration

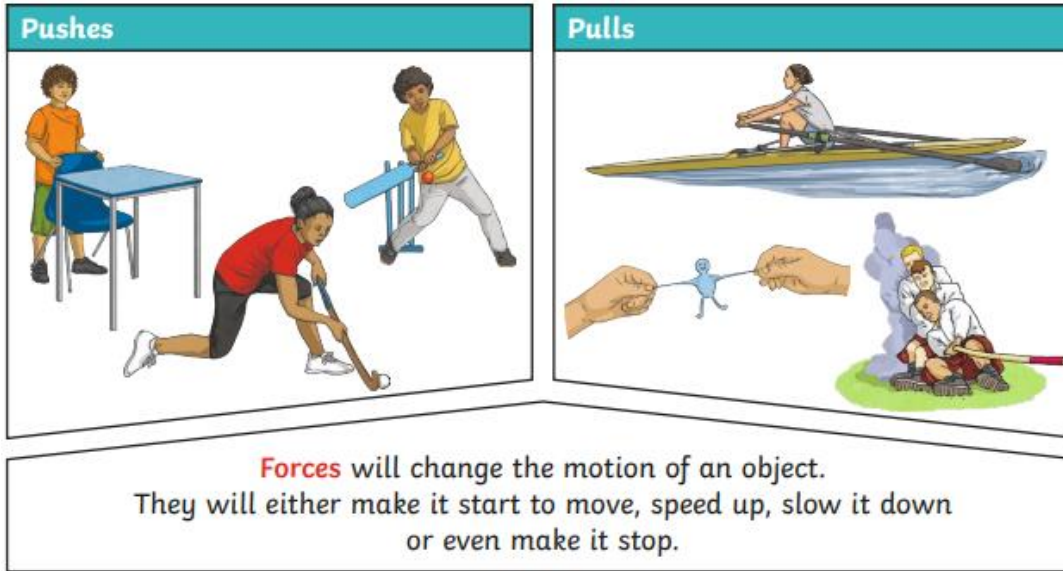

Vocabulary

force: an action that changes the way an object moves.

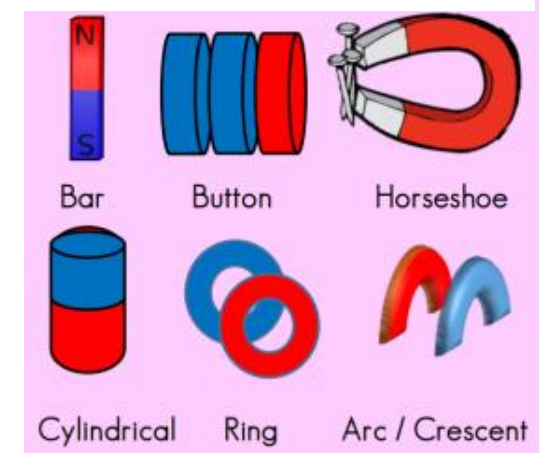

friction: a force that works against a moving object. Different surfaces offer different amounts of friction.

attract: pull together

repel: push away from

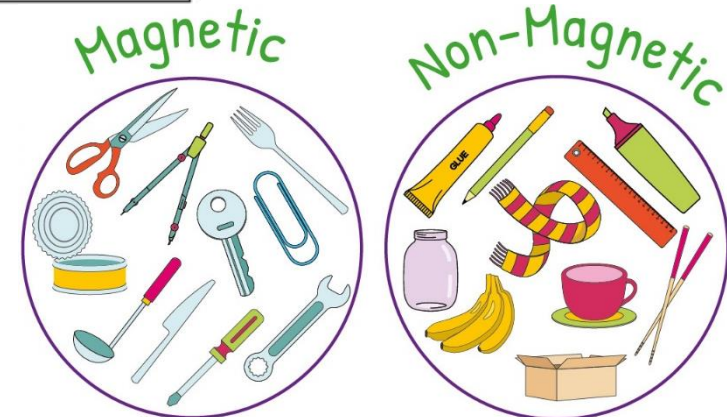

Types of magnets

Magnets have 2 poles.

A north pole and a south pole.

All magnetic objects have metal in them.

Not all metals are magnetic.
