

Science – Year 4 - Plants

Concept: Ecosystems – What all living things need and starting to understand how they depend on each other.

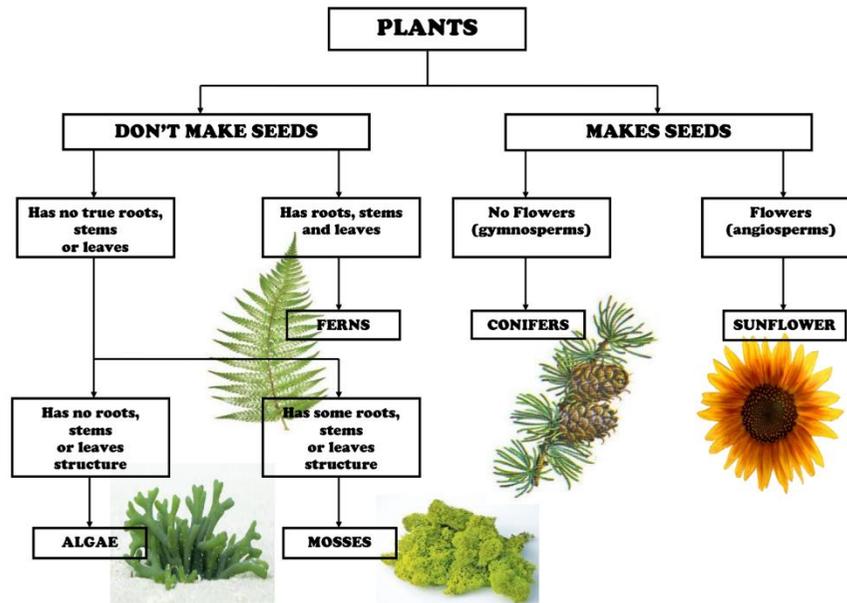

Vocabulary

invasive species: a plant or animal not naturally from that habitat that causes damage to native plants and animals

endangered: at risk of becoming extinct

evergreen: a plant that has leaves all year round

deciduous: a plant that loses its leaves through autumn and winter

Deciduous

OAK

MAPLE

BIRCH

WILLOW

Evergreen

CYPRESS

PINE

CEDAR

JUNIPER

Positive human impact on plant life

- Areas Of Natural Beauty protected
- Nature Reserves
- Eco-parks
- Garden ponds
- Wildflower gardens
- Protection of endangered species
- Artificial reproduction to stop species dying out

Negative human impact on plant life

- Deforestation
- Destruction of natural habitats to build on
- Introduction of invasive animal and plant species
- Chemical pollution
- Forest fires
